

Zero Target for M16A2/A4 (8/3) style iron sights (300 meter zero)

1 – To zero at 25 meters, rotate the rear elevation knob to the 300 meter (8/3) setting. Do not use the z mark or back off any clicks.

2 – Aim at the target center (dark grey circle), adjust sights to move the center of each shot group to the center of the light grey circle. The light grey circle is offset .33 of an inch to adjust for the bullet strike at 25 meters.

3 – After completing the weapon will be zeroed (point of aim, point of impact) for 300 meters.

To print target correctly goto print options and set page scaling to NONE.
